

AI-Native CRM — Full Persona User Manual

This manual describes the major user personas supported by the CRM platform and explains the key workflows, capabilities, and governance responsibilities for each persona.

The exact screens, labels, and available modules depend on your tenant configuration and role permissions. If a section references a page that does not appear, your tenant may have that module disabled or your role may not grant access.

Demo logins

A demo login exists for every canonical role. Use the shared demo password in your environment, or refer to `docs/user-guides/DEMO_LOGINS.md` for the exact seeded email list.

- Tenant: sample-tenant
- Common demo password: Demo@1234
- Super Admin: super.admin@sample-tenant.local
- CRM Admin: crm.admin@sample-tenant.local
- Customer Portal User: customer.portal.user@sample-tenant.local

1. Platform / Super Admin

Who you are: the highest-privilege administrator for the tenant. You configure the workspace, manage roles and users, oversee governance, and can access every module.

What you can do

- See every module and dashboard.
- Manage tenant configuration, users, roles, modules, terminology, and custom fields.
- Review audit logs and system health.
- Configure AI settings, prompts, agents, and workflow governance.

Key pages

- /admin
- /admin/rbac
- /admin/modules
- /admin/terminology
- /admin/custom-fields
- /admin/configuration
- /ai/settings, /ai-prompts, /ai-agents
- /logs
- /workflows

Workflow — Configure a tenant workspace

1. Open /admin and review active modules.
2. Enable or disable modules as needed.

3. Update terminology and branding.
4. Create roles and assign users.
5. Review audit logs for sensitive changes.

Tips

- Use the configuration engine to keep settings data-driven.
 - Require a reason for major config changes whenever possible.
 - Keep AI provider settings safe: rate limits, redaction, and logging.
-

2. CRM Administrator

Who you are: a tenant administrator focused on day-to-day CRM administration, user configuration, and data hygiene.

What you can do

- Manage users and role assignments.
- Maintain option sets (statuses, stages, categories) and terminology.
- Configure custom fields and page layouts.
- Monitor audit logs and notifications.

Key pages

- /admin/rbac
- /admin/modules
- /admin/terminology
- /admin/custom-fields
- /admin/configuration
- /logs

Workflow — Onboard a new user

1. Create the user in admin user management.
2. Assign the appropriate role(s).
3. Confirm the user can sign in and only sees their granted screens.

Tips

- Prefer least privilege.
 - Retire option values rather than deleting them.
 - Validate workflows and configuration drafts before publishing.
-

3. Sales Development Representative (SDR)

Who you are: you qualify inbound and outbound leads and hand off the best ones to sales.

What you can do

- Use the SDR workspace (/sales/sdr).
- Create and update leads.
- Review lead scores, timelines, and notes.
- Use AI for summaries, qualification help, and follow-up drafts.

Workflow — Qualify a lead

1. Open /sales/sdr and pick a lead.
2. Review the lead detail page.
3. Use Ask AI to summarize or draft follow-up messaging.
4. Update status and next steps.
5. Convert or hand off qualified leads.

Tips

- Treat AI drafts as a starting point when they are flagged for review.
 - Keep lead notes and next steps current.
-

4. Inside Sales Executive / Manager

Who you are: you progress qualified leads to opportunities and manage a book of smaller deals.

What you can do

- Use the inside sales workspace (/sales/inside-sales).
- Manage leads, accounts, contacts, and opportunities.
- Track opportunities on the pipeline board.
- Managers can view team dashboards and reassign work.

Workflow — Turn a qualified lead into an opportunity

1. Open a lead in /sales/inside-sales.
2. Create the account/contact if needed.
3. Create an opportunity and set stage/value.
4. Use the pipeline board and notes to track progress.

Tips

- Use saved filters and views to focus on active deals.
 - Keep opportunity stage rationale documented.
-

5. Sales Executive / Manager / Head (Account Executive)

Who you are: you own opportunities through close and manage account relationships; managers/head roles oversee pipeline and performance.

What you can do

- Manage the full Opportunity lifecycle.
- Use Accounts, Contacts, and Opportunities screens.
- View dashboards for pipeline and forecast metrics.
- Managers govern stage moves and team performance.

Workflow — Advance an opportunity stage

1. Open the opportunity detail.
2. Change the stage and add a note.
3. Confirm any approval requirement.

Tips

- Review the pipeline dashboard for stalled deals and forecast risk.
 - Use AI for account briefs and next-step recommendations.
-

6. Business Development

Who you are: you drive strategic pipeline, partnerships, and high-value opportunities beyond standard sales.

What you can do

- Use the Business Development module (/business-development).
- Manage BD initiatives, targets, and stakeholders.
- Collaborate with partners, resellers, and presales.

Workflow — Manage a BD initiative

1. Open /business-development.
2. Create or update an initiative.
3. Link related accounts, opportunities, and partners.
4. Track progress and next steps.

Tips

- Record value drivers and partner engagement clearly.
 - Use dashboards to monitor strategic pipeline health.
-

7. Presales

Who you are: you support deals with technical qualification, demos, and proposals.

What you can do

- Use the Presales workspace (/presales).
- Track engagements, proposals, and demos.
- Use AI to draft proposal outlines and supporting content.

Workflow — Support an opportunity

1. Open the linked presales engagement.
2. Record technical qualification and demo notes.
3. Generate a proposal outline via AI; route it for review.

Tips

- Keep the handoff between sales and presales clear.
 - Ensure proposal drafts are reviewed before sharing.
-

8. Marketing Manager / Executive

Who you are: you plan and run campaigns, marketing programs, and demand-generation activities.

What you can do

- Use the Campaigns module (/campaigns).
- Create campaign plans and manage members.
- Use AI for campaign content and planning.
- View campaign dashboards.

Workflow — Launch a campaign

1. Create a campaign with goals and schedules.
2. Add members and target segments.
3. Use AI to draft messaging or plans.
4. Track performance on the campaign dashboard.

Tips

- Align campaign membership with lead/contact attribution.
 - Review campaign analytics regularly.
-

9. Social Media Marketing

Who you are: you create, schedule, and monitor social media content.

What you can do

- Use the Social module (/social).
- Create and schedule posts.
- Use AI for captions and hashtags.
- Track engagement and campaign alignment.

Workflow — Create a social post

1. Create a scheduled post in /social/new.
 2. Use AI for copy and hashtags.
 3. Review before publishing.
 4. Track the post and engagement.
-

10. Support Executive / Manager

Who you are: you resolve customer tickets; managers oversee queues, escalations, and SLAs.

What you can do

- Use the Support module (/support).
- Create, triage, update, and resolve tickets.
- Use AI for suggested replies and summaries.
- Managers manage assignments and escalations.

Workflow — Resolve a ticket

1. Open the ticket.
2. Review customer history and context.
3. Use AI suggestions; review before sending.

4. Update status and resolve.

Workflow — Handle an AI-escalated query

1. Open the customer-query escalation list.
2. Review the question, answer, and sources.
3. Convert to a ticket if needed.

Tips

- Prioritize high-severity and SLA-breached tickets.
 - Use knowledge articles to speed resolution.
-

11. Customer Success Manager & CS Head

Who you are: you drive adoption, health, onboarding, renewal, and customer outcomes.

What you can do

- Use the Customer Success module (/customer-success).
- Manage accounts, success plans, health scores, and onboarding.
- Monitor risks and escalations.
- CS Head roles oversee team performance.

Workflow — Run onboarding

1. Open the account and onboarding plan.
2. Track milestone completion.
3. Monitor health and risk signals.
4. Use AI for account summaries.

Tips

- Prioritize accounts with declining health scores.
 - Work closely with support and sales for renewals.
-

12. Partner Manager

Who you are: you manage channel partners, joint opportunities, and partner performance.

What you can do

- Use the Partners module (/partners).
- Track partner tiers, agreements, and deals.
- Manage partner-sourced opportunities and engagements.

Workflow — Manage a partner

1. Open the partner record.
 2. Update partner status, tier, and contacts.
 3. Track partner-sourced pipeline.
-

13. Reseller Manager

Who you are: you manage reseller relationships and partner deal registrations.

What you can do

- Use the Resellers module (/resellers).
- Register reseller deals and track margins.
- Monitor reseller pipeline and performance.

Workflow — Register a reseller deal

1. Open a reseller record.
2. Create or update a deal registration.
3. Track the opportunity through the reseller pipeline.

Tips

- Keep reseller terms and margin details current.
 - Confirm conflict management rules are followed.
-

14. Training / Knowledge Manager

Who you are: you build training programs and maintain the knowledge base that supports users and AI.

What you can do

- Use the Training module (/training).
- Manage courses, paths, and learner progress.
- Create knowledge articles and upload documents.
- Review knowledge gaps and RAG retrieval behavior.

Workflow — Publish a knowledge article

1. Create or update an article.
2. Send it through approval and publish.
3. Confirm the article is available for search and AI retrieval.

Workflow — Close a knowledge gap

1. Review the knowledge-gap dashboard.
 2. Identify unanswered user queries.
 3. Publish an article that resolves the gap.
-

15. Customer Portal User (External)

Who you are: an external customer using the self-service customer portal.

What you can do

- Access portal dashboards and tickets.
- Submit support requests.
- Ask AI questions from the portal.

- Browse permitted knowledge articles.
- Complete assigned training.

Workflow — Use the portal AI bot

1. Ask a question in the portal.
2. Review the grounded answer and sources.
3. If the bot cannot answer, it escalates to support.

Tips

- Your portal access is limited to your organization.
 - Feedback improves the AI bot and knowledge base.
-

16. Executive Leadership

Who you are: you need high-level visibility into revenue, pipeline, customer success, support, and strategy.

What you can do

- Use executive dashboards (/analytics, /dashboard).
- Review cross-functional KPIs and trends.
- Export reports and drill into key metrics.

Workflow — Review business health

1. Open the executive analytics dashboard.
2. Review pipeline, forecast, health, and risk widgets.
3. Drill into areas that need attention.

Tips

- Use dashboard exports and saved views for leadership reviews.
 - Pay attention to AI quality and customer health signals.
-

17. AI Administrator

Who you are: you govern the tenant's AI layer, including settings, prompts, agents, and review flows.

What you can do

- Configure AI settings and provider defaults.
- Manage the Prompt Registry (/ai-prompts).
- Manage the Agent Registry (/ai-agents).
- Review AI Actions runs and approve sensitive outputs.
- Monitor AI usage and logging.

Workflow — Approve a sensitive AI action

1. Open /ai-actions and filter pending review.
2. Inspect the prompt, context, and output.
3. Approve or reject with a note.

Workflow — Publish a prompt version

1. Edit a prompt in /ai-prompts.
2. Submit it for activation.
3. Activate the approved version.

Tips

- Ensure AI settings include safe defaults before enabling live providers.
 - Human review is required for sensitive output.
-

18. System Administrator

Who you are: you oversee system-level health, integrations, deployment environments, and backups.

What you can do

- Use the System module (/admin/system or /system).
- Monitor integrations and sync runs.
- Manage environments and deployments.
- Configure backup policies and review restore tests.
- Access the audit log viewer.

Workflow — Monitor an integration

1. Open /system/integrations.
2. Review connection health, failures, and latency.
3. Retry failed runs or mark resolved.

Workflow — Approve a production deployment

1. Open /system/environments.
2. Review the pending deployment.
3. Approve or reject per the rollout plan.

Tips

- Production deployments are gated by approval.
 - Backups should show recent success and no RPO breaches.
-

19. AI Governance Manager

Who you are: you ensure AI usage is safe, explainable, and compliant.

What you can do

- Use the AI governance module (/ai-governance).
- Manage the AI use-case registry.
- Review AI quality dashboards and feedback.
- Monitor hallucination reports and confidence flags.
- Govern approval workflows for high-risk AI use cases.

Workflow — Review an AI use case

1. Open /ai-governance/use-cases.

2. Inspect the use case, risk level, and approval status.
3. Approve or reject changes.

Workflow — Track AI quality

1. Open /ai-governance/quality.
2. Review usage, override rate, and hallucination reports.
3. Create improvement tasks for low-quality areas.

Tips

- Treat AI quality metrics as a governance dashboard.
 - Audit every change to AI prompts, agents, and policies.
-

20. Data Quality Manager

Who you are: you preserve the accuracy, completeness, and hygiene of lead and customer data.

What you can do

- Use the Data Quality module (/data-quality).
- Monitor completeness, invalid contacts, duplicates, and stale records.
- Validate imports and import error reporting.
- Review enrichment suggestions.
- Manage merge workflows with required reasons.

Workflow — Validate an import

1. Open /data-quality/import/validate.
2. Upload the import file.
3. Review row-level errors and fix them.
4. Commit the valid rows.

Workflow — Merge duplicate records

1. Open /data-quality/merge.
2. Select the master and duplicate records.
3. Choose field-level merge results and record a merge reason.

Tips

- Data quality is critical for accurate reporting and AI behavior.
 - Preserve histories during merges and record audit reasons.
-

21. Additional role templates and persona variants

The platform also supports many finer-grained role templates and persona variants derived from the core personas above, including:

- Marketing Operations / RevOps
- Campaign Manager
- Digital Marketing Executive
- Inside Sales Representative

- Business Development Representative
- Account Executive / Strategic Sales
- Presales Consultant
- Solution Architect
- Proposal / Bid Manager
- Commercial / Finance Approver
- Legal / Contract Reviewer
- Reseller / Partner Sales User
- Support Agent L1 / L2
- Executive / CEO / CXO

These roles are typically built by narrowing permissions from the major persona categories described earlier and may be used to tailor access more precisely.

How to use this manual

- Find your persona by title.
 - Follow the key pages and workflows to locate your daily tasks.
 - Use the tips to align with governance and best practices.
 - Consult the linked admin and AI guides for deeper configuration and governance details.
