

AI-Native CRM — Full User Manual

AI-Native CRM — Full User Manual (Persona-Wise)

Audience: every user of the platform, organized by persona/role. **Scope:** end-to-end usage of the web application — navigation, every persona's day-to-day workflows, the AI assistant, the customer portal, administration, and configuration. **How to use this manual:** find your persona in the Table of Contents and read that section; the Common Concepts and Cross-Cutting Features sections apply to everyone. Screen paths in `monospace` are the in-app routes (the part of the URL after the host).

7. [Glossary](#)

1. Getting Started

1.1 What the platform is

An AI-native, multi-tenant CRM that unifies sales, marketing, partner/reseller channels, support, customer success, training, and a customer self-service portal — with a governed AI layer (assistant, actions, retrieval-grounded answers) woven throughout.

1.2 Accessing the application

- Open the web app URL provided by your administrator (in local development: `http://localhost:5173`).
- You will land on the **Login** screen (`/login`).

1.3 Signing in

1. Enter your **Tenant** (organization slug), **Email**, and **Password**.
2. Select **Sign in**.
3. On success you are taken to your **Dashboard** (`/dashboard`).

Notes

- After several failed attempts your account is temporarily **locked** (a security control); wait for the lockout window or contact an admin.
- Sessions stay signed in via a secure refresh token; you are signed out on **Logout** or when the session expires.
- If you see "Invalid tenant, email, or password," any of the three may be wrong — the message is deliberately generic for security.

1.4 Signing out

Use the account menu → **Logout**. This revokes your session immediately.

2. Common Concepts

Concept	What it means for you
Tenant	Your organization. You only ever see your tenant's data; cross-tenant access is impossible by design.
Roles & permissions	What you can see and do is governed by your assigned role(s). If a button or menu is missing, your role doesn't grant it. A 403 /"You do not have permission" message means an action is outside your role.
Configurability	Admins can rename objects (terminology), toggle modules on/off, theme the UI, and add custom fields — so labels and available screens vary per tenant.
Audit trail	Sensitive actions (logins, permission denials, exports, AI runs, configuration changes) are logged for compliance.
AI assistant	A governed assistant is available across the app; sensitive AI outputs require human review before they're considered usable.
Soft delete	Most "Delete" actions archive a record (it can be restored by an admin) rather than destroying data.

3. Navigation & Screens

The left navigation adapts to your permissions. Common destinations:

Area	Path	Who typically uses it
Dashboard	/dashboard	Everyone
Leads	/leads	Sales, SDR, marketing
Accounts	/accounts	Sales, CS, support
Contacts	/contacts	Sales, CS, support, marketing
Opportunities	/opportunities	Sales
Campaigns	/campaigns	Marketing
Social	/social	Social media marketing
SDR workspace	/sales/sdr	SDR
Inside-sales workspace	/sales/inside-sales	Inside sales
Business development	/business-development	BD
Presales	/presales	Presales
Partners	/partners	Partner managers
Resellers	/resellers	Reseller managers
Support	/support , /tickets	Support
Customer success	/customer-success	CS
Training	/training	Training, learners
Knowledge base	/knowledge , /knowledge/articles	Knowledge managers
Analytics & dashboards	/analytics	Managers, executives
Notifications	/notifications	Everyone
Approvals	/approvals	Approvers
Workflows	/workflows	Admins, ops
AI assistant	/ai-assistant , /ask-ai	Everyone (permitting)
AI actions / agents / prompts	/ai-actions , /ai-agents , /ai-prompts	AI admins
Customer-query review	/customer-query , /customer-query/gaps	Support/AI reviewers
RAG console	/knowledge/rag-console	AI/knowledge admins
Administration	/admin (rbac, modules, theme, terminology, custom-fields)	Admins
Profile	/profile	Everyone

Area	Path	Who typically uses it
Customer portal	/portal/*	External customers

If you navigate to a screen your role can't access you'll see the **Unauthorized** page.

4. Personas

Each persona below lists: **who you are**, **what you can do**, **key step-by-step workflows**, and **tips**.

4.1 Platform / Super Admin

Who you are: the highest-privilege administrator. You configure the tenant, manage roles and users, oversee AI governance, and can access every module.

What you can do

- Manage roles and permissions (/admin/rbac).
- Enable/disable modules per tenant (/admin/modules).
- Theme the UI (/admin/theme) and rename objects/terminology (/admin/terminology).
- Define custom fields (/admin/custom-fields).
- Review the audit log and data-governance settings.
- Configure AI settings, prompts, and agents.

Workflow — Create a role and assign permissions

1. Go to /admin/rbac .
2. Select **Create role**; give it a name and description.
3. Choose the module permissions (view/create/edit/delete/configure, etc.).
4. Save. The role becomes assignable to users.

Workflow — Enable or disable a module

1. Go to /admin/modules .
2. Toggle a module on/off. Disabled modules disappear from users' navigation.
3. Save; changes are audit-logged.

Workflow — Brand the workspace

1. /admin/theme — set colors/logo; /admin/terminology — rename objects (e.g., "Opportunities" → "Deals").
2. Save; labels update across the app for all users in the tenant.

Tips

- Every configuration change is recorded in the audit log.
- Production deployments enforce strong secrets and secure cookies automatically; coordinate environment settings with your DevOps team.

4.2 CRM Admin

Who you are: a tenant administrator focused on day-to-day CRM administration (users, configuration, data hygiene) without necessarily holding platform-level powers.

What you can do

- Manage users and role assignments.
- Maintain option sets (statuses, stages, categories) and terminology.
- Configure custom fields and module settings.
- Monitor audit and notifications.

Workflow — Onboard a new internal user

1. Create the user (admin user management).
2. Assign the appropriate role(s) for their persona.
3. Confirm they can sign in and see only the screens their role grants.

Tips

- Prefer least-privilege: assign the narrowest role that lets someone do their job.
- Use terminology settings to match your company's vocabulary instead of customizing code.

4.3 Sales Development Representative (SDR)

Who you are: you prospect and qualify inbound/outbound leads and hand off qualified ones.

What you can do

- Work the **SDR workspace** (`/sales/sdr`): prioritized leads, qualification, next steps.
- Create and update **Leads** (`/leads` , `/leads/new`).
- Use the **AI assistant** for lead summaries, intent detection, and follow-up drafts.

Workflow — Qualify a lead

1. Open `/sales/sdr` and pick a lead from your queue.
2. Review the lead detail (`/leads/:leadId`): activity timeline, notes, score.

3. Use **Ask AI** for a lead summary or a follow-up email draft (sensitive drafts are returned for review).
4. Update status/qualification and log the next step.
5. Convert/hand off qualified leads to inside sales or an account executive.

Tips

- AI follow-up drafts flagged "review" are not final until an authorized reviewer approves them.
- Keep notes and next steps current — they feed dashboards and handoffs.

4.4 Inside Sales Executive / Manager

Who you are: you progress qualified leads toward opportunities and manage a book of smaller deals.

What you can do

- Use the **inside-sales workspace** (`/sales/inside-sales`).
- Manage **Leads**, **Accounts**, **Contacts**, and **Opportunities**.
- Managers: view team dashboards and reassign work.

Workflow — Turn a qualified lead into an opportunity

1. From `/sales/inside-sales` , open the lead.
2. Create the associated **Account/Contact** if needed.
3. Create an **Opportunity** (`/opportunities/new`), set stage and value.
4. Track progression on the pipeline board.

Tips

- Use list filters and saved views to focus on your active book.

4.5 Sales Executive / Manager / Head (Account Executive)

Who you are: you own opportunities through close and manage account relationships; managers/heads oversee pipeline and team performance.

What you can do

- Full **Opportunity** lifecycle (`/opportunities`): create, edit, move stages (role-aware), Kanban pipeline.
- Manage **Accounts** (`/accounts`) and **Contacts** (`/contacts`) with timelines and notes.
- View **Dashboards/Analytics** (`/analytics`) for pipeline metrics.
- Managers: stage-movement governance, team rollups.

Workflow — Advance an opportunity stage

1. Open `/opportunities` (list or Kanban) and select the opportunity.
2. On the detail screen, change the **stage**; add a note describing the next step.
3. Stage changes are audited; some transitions may require permission.

Workflow — Maintain an account relationship

1. Open `/accounts/:accountId`.
2. Review the timeline (meetings, emails, notes), related contacts, and opportunities.
3. Use **Ask AI** for an account brief or relationship summary.

Tips

- Use the pipeline dashboard to spot stalled deals and at-risk forecasts.

4.6 Business Development

Who you are: you drive strategic pipeline and partnerships beyond standard inbound sales.

What you can do

- Use the **Business Development** module (`/business-development`) to manage BD pipeline and initiatives.
- Collaborate with partners/resellers and presales.

Workflow — Manage a BD initiative

1. Open `/business-development`.
2. Create/track the initiative and its pipeline entries.
3. Link related accounts/opportunities; record progress and next steps.

4.7 Presales

Who you are: you support deals with technical qualification, demos, and proposals.

What you can do

- Use the **Presales** module (`/presales`) to track presales engagements and deliverables.
- Use AI to draft proposal outlines (sensitive → review).

Workflow — Support an opportunity

1. Open `/presales` and the linked engagement.

2. Record technical qualification, demo notes, and proposal status.
3. Generate a proposal outline via AI Actions; route it for review before sending.

4.8 Marketing Manager / Executive

Who you are: you plan and run campaigns and manage marketing-sourced pipeline.

What you can do

- Full **Campaigns** lifecycle (`/campaigns`): create, edit, manage members.
- Use AI for campaign plans, email copy, and audience suggestions (sensitive → review).
- View campaign dashboards.

Workflow — Launch a campaign

1. Go to `/campaigns/new` ; set name, type, dates, and goals.
2. Add **members** (target leads/contacts) to the campaign.
3. Use **AI Actions** for a campaign plan or email copy; send drafts to review.
4. Track performance on the campaign dashboard.

Tips

- Campaign membership ties into lead/contact records for attribution.

4.9 Social Media Marketing

Who you are: you create and schedule social content and track engagement.

What you can do

- Manage **Social** posts (`/social` , `/social/new`): create, edit, schedule.
- Use AI for captions and hashtag suggestions (sensitive → review).

Workflow — Create a social post

1. Go to `/social/new` ; compose the post and set the channel/schedule.
2. Use **Ask AI** for a caption or hashtags; review before publishing.
3. Save/schedule; track on the social detail screen.

4.10 Support Executive / Manager

Who you are: you resolve customer tickets; managers oversee the queue and SLAs.

What you can do

- Manage **Tickets** (`/support` , `/tickets`): create, triage, update, resolve.

- Use AI for suggested replies and ticket summaries (sensitive → review).
- Managers: assignment, escalation oversight, support dashboards.
- Review AI customer-query sessions that escalated into tickets (`/customer-query`).

Workflow — Resolve a ticket

1. Open `/support` (or `/tickets`) and select a ticket.
2. Review history and customer context.
3. Use **AI suggested response**; edit and (if flagged) route for review.
4. Update status/priority; resolve when complete.

Workflow — Handle an AI-escalated query

1. Open `/customer-query` to see sessions the AI bot escalated (low confidence, no answer, or level-3 topics).
2. Review the question, the AI's grounded answer, and citations.
3. Take over: respond, or convert to a ticket; mark resolved.

Tips

- Knowledge gaps surfaced by the AI bot (`/customer-query/gaps`) tell you which articles to add.

4.11 Customer Success Manager & CS Head

Who you are: you drive adoption, health, onboarding, and renewals. Variants:

Onboarding, Scaled, Enterprise, and CS Head (oversight).

What you can do

- Use the **Customer Success** module (`/customer-success`): managed accounts, health scores, onboarding plans, playbooks.
- View health dashboards and at-risk accounts.
- CS Head: portfolio rollups and team oversight.

Workflow — Run an onboarding

1. Open `/customer-success` and the assigned account.
2. Follow the onboarding playbook tasks; record completion.
3. Monitor the **health score**; act on risk indicators.
4. Use AI for a health-indicator explanation or account brief.

Tips

- Health scoring combines signals; use it to prioritize outreach.

4.12 Partner Manager

Who you are: you manage partner relationships and partner-sourced pipeline.

What you can do

- Use the **Partners** module (`/partners`): partner records, tiers, engagements.
- Collaborate with BD and resellers.

Workflow — Manage a partner

1. Open `/partners` and the partner record.
2. Maintain tier, contacts, and engagement notes.
3. Track partner-sourced opportunities.

4.13 Reseller Manager

Who you are: you manage resellers, deal registrations, and channel pipeline.

What you can do

- Use the **Resellers** module (`/resellers`): reseller records, **deal registration**, scoped pipeline, margins.
- Use AI for reseller-growth insights.

Workflow — Register and track a deal

1. Open `/resellers` and the reseller.
2. Register a deal (links the reseller to an opportunity with margin/agreement details).
3. Track status through the scoped pipeline.

Tips

- Your pipeline view is scoped to the resellers/owners you're permitted to see.

4.14 Training / Knowledge Manager

Who you are: you build training and curate the knowledge base that grounds AI answers.

What you can do

- Manage **Training** (`/training`): learning paths, courses, learner progress.
- Manage the **Knowledge base** (`/knowledge` , `/knowledge/articles`): author, review, approve, and publish articles.
- Upload documents (`/knowledge/upload`) and inspect retrieval via the **RAG console** (`/knowledge/rag-console`).

- Review **knowledge gaps** (`/knowledge-gap-dashboard` / `/customer-query/gaps`).

Workflow — Publish a knowledge article

1. Go to `/knowledge/articles` ; create/edit an article.
2. Move it through **approved** and **published** states.
3. Only approved + published, permission-appropriate articles are used by AI retrieval and the customer-query bot.

Workflow — Close a knowledge gap

1. Open the knowledge-gap dashboard.
2. Pick a recurring unanswered query; author an article that answers it.
3. Publish; mark the gap resolved.

Tips

- Use the RAG console to preview what the AI would retrieve for a query and verify permission filtering.

4.15 Customer Portal User (External)

Who you are: an external customer using the self-service portal. You only see your own organization's data.

What you can do (`/portal/*`)

- **Dashboard** (`/portal/dashboard`): your overview.
- **Tickets** (`portal/tickets`): raise and track support tickets.
- **Ask AI** (`customer-portal-ask-ai`): ask questions; get answers grounded in approved knowledge with citations, or an automatic escalation.
- **Knowledge** (`customer-portal-knowledge`): browse permitted articles.
- **Training** (`customer-portal-training`): access assigned training.
- **Profile** (`customer-portal-profile`): manage your details.

Workflow — Get help via the AI bot

1. Open **Ask AI** in the portal.
2. Type your question. The bot answers **only** from approved knowledge and shows its sources.
3. If it can't find a confident, approved answer, it tells you and **escalates** (often creating a support ticket) instead of guessing.
4. Rate the answer **helpful** / **not helpful** — your feedback improves the knowledge base.

Tips

- You will never see another customer's data; access is restricted to your account.
- Urgent/sensitive topics (e.g., outages, billing) are escalated automatically.

4.16 Executive Leadership

Who you are: you need cross-functional visibility, not day-to-day data entry.

What you can do

- View **Analytics & dashboards** (`/analytics` , `/dashboard`): executive overview, pipeline, campaigns, support, CS health.
- Drill down and export dashboards (subject to permission).
- Use AI for executive insight summaries.

Workflow — Review the business

1. Open `/analytics` and the **Executive** dashboard.
2. Apply date filters; drill into widgets.
3. Export where needed (exports are audit-logged).

4.17 AI Administrator

Who you are: you govern the AI layer — prompts, agents, actions, settings, and retrieval.

What you can do

- Configure tenant **AI settings** (provider/model, rate limit, redaction, logging).
- Manage the **Prompt Registry** (`/ai-prompts`): versioned, approvable prompt templates.
- Manage the **Agent Registry** (`/ai-agents`): agents with tools, data scope, and human-approval rules.
- Review **AI Actions** runs (`/ai-actions`) and approve/reject sensitive outputs.
- Tune retrieval via the **RAG console** and monitor **AI usage logs**.

Workflow — Approve a sensitive AI action

1. Open `/ai-actions` ; filter to **pending review**.
2. Open a run; inspect the resolved prompt and output.
3. **Approve** or **Reject** with a note. Only approved outputs are usable; all decisions are audit-logged.

Workflow — Publish a new prompt version

1. Open `/ai-prompts` ; edit a template (creates a new version).
2. Submit for approval/activation per your permissions.

3. Activate the version; callers reference it by `templateKey` (prompts are never hardcoded).

Tips

- Before enabling live AI providers, ensure rate-limit enforcement and output redaction are in place (see AI governance docs).
 - AI calls run through one governed gateway; agents declare their data-access scope and whether they need human approval.
-

5. Cross-Cutting Features

5.1 AI Assistant (`/ai-assistant` , `/ask-ai` , `/ai-help`)

- Available across the app where your permissions allow (`ai.use_ai`).
- Answers and drafts are governed: prompts come from the managed registry, every run is logged, and **sensitive outputs require human review** before use.
- Retrieval-grounded answers cite their sources; the assistant won't fabricate when it lacks grounding.

5.2 Dashboards & Insights (`/analytics` , `/dashboard`)

- Role-aware: you only see dashboards your permissions grant.
- Features: date filters, widget **drilldown**, **export**, and **saved views** (you can edit/delete your own).

5.3 Notifications (`/notifications`)

- In-app notifications with **preferences** (what you're notified about) and **mark read / mark all read**.

5.4 Approvals (`/approvals`)

- Generic approval requests (used by workflows and sensitive actions): review, **approve/reject**, and comment. Approvals are permissioned and audited.

5.5 Workflows (`/workflows`)

- Automations with conditions and actions. Admin/ops users create and manage them; runs integrate with approvals and notifications.

5.6 Search, Profile, and Settings

- **Profile** (/profile): your details and preferences.
- Navigation, labels, and available modules reflect your tenant's configuration and your role.

5.7 Audit & Compliance

- Logins, permission denials, exports, configuration changes, and AI runs are recorded. Admins can review the audit trail.

6. Troubleshooting & FAQ

Symptom	Likely cause	What to do
"You do not have permission" / Unauthorized page	Your role lacks that action	Ask an admin to grant the role/permission
Can't sign in ("Invalid tenant, email, or password")	Wrong tenant/email/password, or account locked	Verify all three; wait out a lockout or contact an admin
A module is missing from navigation	Module disabled for the tenant, or role lacks access	Confirm with an admin
AI answer says it couldn't find an approved answer	No approved/published knowledge matched	The query is escalated; a knowledge gap is logged for authors
AI output marked "pending review"	It's a sensitive action	An authorized reviewer must approve before it's usable
Labels differ from this manual	Tenant terminology customization	Your admin renamed objects; behavior is the same
Data endpoints return "unavailable"	Database integration disabled (non-prod)	Expected in offline mode; use a configured environment

7. Glossary

- **Tenant** — an isolated organization/workspace.
- **Role / Permission** — the access bundle that governs what you can see and do.
- **Opportunity** — a sales deal (may be renamed by your tenant).

- **Pipeline** — the stages a deal moves through.
 - **Campaign** — a marketing program with members and metrics.
 - **Deal registration** — a reseller claiming/registering a deal.
 - **Health score** — a customer-success risk/adoption indicator.
 - **Knowledge article** — a curated answer; must be approved + published to ground AI.
 - **RAG** — retrieval-augmented generation: grounding AI answers in approved knowledge with citations.
 - **AI action** — a predefined AI task (summary, draft, recommendation) run through the governed gateway.
 - **Agent** — a configured AI assistant with declared tools, data scope, and approval rules.
 - **Escalation** — routing an AI query or ticket to a human/queue.
 - **Audit log** — the immutable record of sensitive events.
-
