

AI-Native CRM — Persona-Wise Workflow Guide

Step-by-step workflows for every role, each with a ready-to-use demo login

Audience: every user and evaluator, organised by persona/role.

Scope: the day-to-day, end-to-end workflows each persona runs — with a demo login so you can sign in and follow along on the live demo. **Companion document:** *Module Guide* (what each module does and how it connects).

How to sign in to the demo

Every canonical role has a ready-made login on the seeded demo tenant, so you can experience RBAC first-hand — the **left navigation adapts to each role**, and actions a role lacks are hidden or denied (`403 / Unauthorized`).

Field	Value
Tenant	<code>apar-elite</code>
Password (all 28 persona logins)	<code>AparDemo@2026!</code>
Administrator login	<code>demo.admin@apar-elite.com</code> / <code>AparAdmin@2026!</code>
Email pattern	the role name in lower-case, dot-separated, <code>@apar-elite.com</code>

The data is pre-seeded: 200+ education-organisation leads plus sample accounts and opportunities, so dashboards and lists are populated from the first sign-in. These are demo accounts with a shared, well-known password — never seed them in a production tenant.

What to look for (RBAC in action): Super Admin sees everything; a Support Executive sees support; the Customer Portal User only sees the external portal (`/portal/*`). If a module is missing from your navigation, your role doesn't grant it (or the tenant disabled it).

Persona index

#	Persona	Demo login (@apar-elite.co
1	Platform / Super Admin	super.admin
2	CRM Admin	crm.admin
3	Sales Development Rep (SDR)	sales.development.repres
4	SDR Manager	sdr.manager
5	Inside Sales Executive	inside.sales.executive
6	Inside Sales Manager	inside.sales.manager
7	Sales Executive	sales.executive
8	Sales Manager	sales.manager
9	Sales Head / Leader	sales.head / sales.leade
10	Business Development	business.development.man executive
11	Presales	presales.manager / presales.executive
12	Marketing Manager / Executive	marketing.manager / marketing.executive
13	Social Media Marketing	social.media.marketing.m executive
14	Support Executive / Manager	support.executive / supp
15	Customer Success (Onboarding/Scaled/Enterprise)	customer.success.manager ...
16	CS Head	customer.success.head
17	Partner Manager	partner.manager

#	Persona	Demo login (@apar-elite.c
18	Reseller Manager	reseller.manager
19	Executive Leadership	executive.leadership
20	Customer Portal User (external)	customer.portal.user

Training / Knowledge and AI Administration are typically held by an admin or a dedicated role; on the demo, sign in as **Super Admin** to exercise those workflows.

1. Platform / Super Admin

Login: `super.admin@apar-elite.com` · **Who you are:** the highest-privilege administrator — you configure the tenant, manage roles and users, and oversee AI governance.

Workflow — Create a role and assign permissions

1. Go to `/admin/rbac`.
2. Select **Create role**; give it a name and description.
3. Choose module permissions (view / create / edit / delete / configure, etc.).
4. Save — the role becomes assignable to users.

Workflow — Enable or disable a module

1. Go to `/admin/modules`.
2. Toggle a module on/off (disabled modules disappear from users' navigation).
3. Save — the change is audit-logged.

Workflow — Brand the workspace

1. `/admin/theme` — set colours/logo.
2. `/admin/terminology` — rename objects (e.g. "Opportunities" → "Deals").
3. Save — labels update across the app for everyone in the tenant.

Tips. Every configuration change is audited. Production enforces strong secrets and secure cookies automatically.

2. CRM Admin

Login: `crm.admin@apar-elite.com` · **Who you are:** a tenant administrator focused on day-to-day CRM administration (users, configuration, data hygiene).

Workflow — Onboard a new internal user

1. Create the user in admin user management.
2. Assign the appropriate role(s) for their persona.
3. Confirm they can sign in and see only the screens their role grants.

Tips. Prefer least privilege — assign the narrowest role that lets someone do their job. Use terminology settings instead of customising code.

3. Sales Development Representative (SDR)

Login: `sales.development.representative@apar-elite.com` · **Manager:** `sdr.manager@apar-elite.com` · **Who you are:** you prospect and qualify inbound/outbound leads and hand off qualified ones.

Workflow — Qualify a lead

1. Open `/sales/sdr` and pick a lead from your queue.
2. Review the lead detail (`/leads/:leadId`): timeline, notes, score.
3. Use **Ask AI** for a lead summary or a follow-up email draft (sensitive drafts return for review).
4. Update status/qualification and log the next step.
5. Convert/hand off qualified leads to inside sales or an account executive.

Tips. AI drafts flagged "review" aren't final until an authorised reviewer approves them. Keep notes and next steps current — they feed dashboards and handoffs.

4. Inside Sales Executive / Manager

Login: `inside.sales.executive@apar-elite.com` · **Manager:** `inside.sales.manager@apar-elite.com` · **Who you are:** you progress qualified leads into opportunities and manage a book of smaller deals.

Workflow — Turn a qualified lead into an opportunity

1. From `/sales/inside-sales`, open the lead.
2. Create the associated **Account/Contact** if needed.
3. Create an **Opportunity** (`/opportunities/new`); set stage and value.

4. Track progression on the pipeline board.

Tips. Use list filters and saved views to focus on your active book. Managers can view team dashboards and reassign work.

5. Sales Executive / Manager / Head (Account Executive)

Logins: `sales.executive` · `sales.manager` · `sales.head` · `sales.leader` (`@apar-elite.com`) · **Who you are:** you own opportunities through close and manage account relationships; managers/heads oversee pipeline and team performance.

Workflow — Advance an opportunity stage

1. Open `/opportunities` (list or Kanban) and select the opportunity.
2. On the detail screen, change the **stage**; add a note describing the next step.
3. Stage changes are audited; some transitions may require permission.

Workflow — Maintain an account relationship

1. Open `/accounts/:accountId`.
2. Review the timeline (meetings, emails, notes), related contacts, and opportunities.
3. Use **Ask AI** for an account brief or relationship summary.

Tips. Use the pipeline dashboard to spot stalled deals and at-risk forecasts.

6. Business Development

Logins: `business.development.manager` · `business.development.executive` (`@apar-elite.com`) · **Who you are:** you drive strategic pipeline and partnerships beyond standard inbound sales.

Workflow — Manage a BD initiative

1. Open `/business-development`.
 2. Create/track the initiative and its pipeline entries.
 3. Link related accounts/opportunities; record progress and next steps.
-

7. Presales

Logins: `presales.manager` · `presales.executive` (`@apar-elite.com`) · **Who you are:** you support deals with technical qualification, demos, and proposals.

Workflow — Support an opportunity

1. Open `/presales` and the linked engagement.
 2. Record technical qualification, demo notes, and proposal status.
 3. Generate a proposal outline via **AI Actions**; route it for review before sending.
-

8. Marketing Manager / Executive

Logins: `marketing.manager` · `marketing.executive` (`@apar-elite.com`) · **Who you are:** you plan and run campaigns and manage marketing-sourced pipeline.

Workflow — Launch a campaign

1. Go to `/campaigns/new` ; set name, type, dates, and goals.
2. Add **members** (target leads/contacts) to the campaign.
3. Use **AI Actions** for a campaign plan or email copy; send drafts to review.
4. Track performance on the campaign dashboard.

Tips. Campaign membership ties into lead/contact records for attribution.

9. Social Media Marketing

Logins: `social.media.marketing.manager` · `social.media.marketing.executive` (`@apar-elite.com`) ·

Who you are: you create and schedule social content and track engagement.

Workflow — Create a social post

1. Go to `/social/new` ; compose the post and set the channel/schedule.
 2. Use **Ask AI** for a caption or hashtags; review before publishing.
 3. Save/schedule; track on the social detail screen.
-

10. Support Executive / Manager

Logins: `support.executive` · `support.manager` (`@apar-elite.com`) · **Who you are:** you resolve customer tickets; managers oversee the queue and SLAs.

Workflow — Resolve a ticket

1. Open `/support` (or `/tickets`) and select a ticket.
2. Review history and customer context.

3. Use **AI suggested response**; edit and (if flagged) route for review.
4. Update status/priority; resolve when complete.

Workflow — Handle an AI-escalated query

1. Open `/customer-query` to see sessions the AI bot escalated (low confidence, no answer, or sensitive topics).
2. Review the question, the AI's grounded answer, and citations.
3. Take over: respond, or convert to a ticket; mark resolved.

Tips. Knowledge gaps surfaced by the bot (`/customer-query/gaps`) tell you which articles to add.

11. Customer Success Manager & CS Head

Logins: `customer.success.manager.onboarding` · `...scaled` · `...enterprise` · `customer.success.head` (`@apar-elite.com`) ·

Who you are: you drive adoption, health, onboarding, and renewals.

Workflow — Run an onboarding

1. Open `/customer-success` and the assigned account.
2. Follow the onboarding playbook tasks; record completion.
3. Monitor the **health score**; act on risk indicators.
4. Use AI for a health-indicator explanation or account brief.

Tips. Health scoring combines signals — use it to prioritise outreach. CS Head sees portfolio rollups and team oversight.

12. Partner Manager

Login: `partner.manager@apar-elite.com` · **Who you are:** you manage partner relationships and partner-sourced pipeline.

Workflow — Manage a partner

1. Open `/partners` and the partner record.
 2. Maintain tier, contacts, and engagement notes.
 3. Track partner-sourced opportunities.
-

13. Reseller Manager

Login: `reseller.manager@apar-elite.com` · **Who you are:** you manage resellers, deal registrations, and channel pipeline.

Workflow — Register and track a deal

1. Open `/resellers` and the reseller.
2. Register a deal (links the reseller to an opportunity with margin/agreement details).

3. Track status through the scoped pipeline.

Tips. Your pipeline view is scoped to the resellers/owners you're permitted to see.

14. Training / Knowledge Manager

Login (demo): `super.admin@apar-elite.com` · **Who you are:** you build training and curate the knowledge base that grounds AI answers.

Workflow — Publish a knowledge article

1. Go to `/knowledge/articles` ; create/edit an article.
2. Move it through **approved** and **published** states.
3. Only approved + published, permission-appropriate articles are used by AI retrieval and the customer-query bot.

Workflow — Close a knowledge gap

1. Open the knowledge-gap dashboard (`/customer-query/gaps`).
2. Pick a recurring unanswered query; author an article that answers it.
3. Publish; mark the gap resolved.

Tips. Use the **RAG console** (`/knowledge/rag-console`) to preview what the AI would retrieve and verify permission filtering.

15. Customer Portal User (External)

Login: `customer.portal.user@apar-elite.com` · **Who you are:** an external customer using the self-service portal — you only see your own organisation's data.

Workflow — Get help via the AI bot

1. Open **Ask AI** in the portal (`/portal/*`).
2. Type your question. The bot answers **only** from approved knowledge and shows its sources.
3. If it can't find a confident, approved answer, it tells you and **escalates** (often creating a support ticket) instead of guessing.
4. Rate the answer **helpful / not helpful** — your feedback improves the knowledge base.

Tips. You'll never see another customer's data. Urgent/sensitive topics (e.g. outages, billing) are escalated automatically.

16. Executive Leadership

Login: `executive.leadership@apar-elite.com` · **Who you are:** you need cross-functional visibility, not day-to-day data entry.

Workflow — Review the business

1. Open `/analytics` and the **Executive** dashboard.
2. Apply date filters; drill into widgets.
3. Export where needed (exports are audit-logged).

Tips. Set your most-used dashboard as your personal default so it opens on sign-in.

17. AI Administrator

Login (demo): `super.admin@apar-elite.com` · **Who you are:** you govern the AI layer — prompts, agents, actions, settings, and retrieval.

Workflow — Approve a sensitive AI action

1. Open `/ai-actions` ; filter to **pending review**.
2. Open a run; inspect the resolved prompt and output.
3. **Approve** or **Reject** with a note. Only approved outputs are usable; all decisions are audit-logged.

Workflow — Publish a new prompt version

1. Open `/ai-prompts` ; edit a template (creates a new version).
2. Submit for approval/activation per your permissions.
3. Activate the version; callers reference it by `templateKey` (prompts are never hardcoded).

Tips. Before enabling live AI providers, ensure rate-limit enforcement and output redaction are in place. All AI calls run through one governed gateway; agents declare their data-access scope and whether they need human approval.

Troubleshooting (any persona)

Symptom	Likely cause	What to do
"You do not have permission" / Unauthorized	Your role lacks that action	Ask an admin to grant the role/permission
Can't sign in ("Invalid tenant, email, or password")	Wrong tenant/email/password, or account locked	Verify all three; wait out a lockout or contact an admin
A module is missing from navigation	Module disabled for the tenant, or role lacks access	Confirm with an admin
AI answer says it couldn't find an approved answer	No approved/published knowledge matched	The query is escalated; a knowledge gap is logged for authors
AI output marked "pending review"	It's a sensitive action	An authorised reviewer must approve before it's usable
Labels differ from this guide	Tenant terminology customisation	Behaviour is the same; your admin renamed objects

Companion: see the **Module Guide** for what each module does and how it connects. Source of record: [docs/user-guides/USER_MANUAL.md](#) and the [Documentation Index](#).
